

## PAKK RATT Tire Cover Storage

By Will Morgan

One thing that wheelers and adventurers face is trying to figure out where to place all of the gear that we need to make sure that whatever the circumstances, we will have the necessary equipment; no matter how far from home or civilization we might be.

The folks at PAKK RATT have come up with a solution by building a spare tire cover that is so much more than that. The PAKK RATT utilizes the wasted space inside the tire itself and has created a storage area that is not only quick and easy to access, it also looks great. They have integrated a buckle system outside and a space inside the cover that can be used to store everything from winch controls, shovels, saws, gloves, tree savers, bungee cords etc. The buckles on the outside are for making a tow strap accessible and in-place while on the trail. The tow strap keeper on the outside eliminates a muddy strap having to be thrown in the back of the Jeep, thus saving you the time of having to clean dirt, mud or water.

Having used this product out on the trail during multiple wheeling trips, I have found it more and more useful each time and I am completely impressed with the quality in the design. The PAKK RATT is available in all tire sizes and is made with high grade Poly-nylon dyed canvas. It is available in black or camouflage with two versions to choose from, the "Off Road" and the "Universal" which can be used on inside-mounted or trailer-mounted spare tires.

## Nomad's Portable Pressure Washer

By Will Morgan

Nomad has created a product that is just the right size for packing into a trailer or Jeep® vehicle. The Portable Pressure Washer allows for quick pressure washing on the trail or at camp to get mud or dirt out of the way before starting a trail fix or simple clean up job. This neat little unit is not much different in size than a five gallon fuel can, and is impressive in design and function.

The folks at Nomad have done a great job in the design of this unit, which is powered by an 18volt rechargeable battery or by a simple plug and use system. A neoprene storage pouch keeps all the accessories self-contained and easy to keep together.

As I unpacked the product, I began to look around to see what I could use it on. With 3.5 gallons of space and no worries about cords to drag around, I was ready to go. Since it was too late in the season to find any unsuspecting victims for a water fight, I went ahead and attacked the mud from a recent wheeling trip.

Another neat thing is the adjusting spray nozzle which allows for stream spray for those tough jobs or a finer spray that works nicely for spraying yourself or your vehicle after a day of playing. The battery lasts and the pressure was good from this washer. In all, I was very impressed with its performance.

Lastly, the kit includes a filter so if you fill up your water from a lake, creek or pond, you don't have to worry about accidentally grabbing debris that may do damage to the unit. Units are available in orange or green and come with a one year warranty.
